

CALLER ID WITH CALL WAITING

Alerts you with a beep during a telephone conversation that another call is waiting to be answered, and allows you to view the telephone number of the incoming telephone call originating within your Advanced Calling service area. The telephone number may be displayed between the first and the second ring on a customer-provided display device. You may place the first call on hold so that the second call can be answered. The second call may be answered by depressing and quickly releasing the receiver button.
