

CALLING NUMBER AND NAME DELIVERY BLOCKING-PER CALL

Calling Number and Name Delivery Blocking-per Call allows you to prevent your telephone number and name from being transmitted to the party you are calling. The feature is activated by dialing a special code every time you want your ID information blocked.

To Activate:

1. Lift the receiver and listen for dial tone.
2. Press *67 (1167 for rotary or dial pulse telephones).
3. Listen for a confirmation tone followed by dial tone.
4. Dial the desired telephone number.

If the party you are calling has a Caller ID device, the device will display a message such as "PRIVATE NUMBER" and "PRIVATE NAME," depending upon the particular Caller ID device. Advanced Calling Services that transmit the number of the last calling party will announce your telephone number as a "private" entry.

Note:

A Permanent Call Blocking option is available only to established shelters of domestic violence intervention agencies, law enforcement agency offices, and other legally specified agencies. This service is in operation on a continuous basis, blocking the transmission of the Subscriber's telephone number and name on all outgoing telephone calls.
