

Perform the following steps to set up your Nefcom email for your iPhone/iPad:

Open **Settings**

Go to **Mail, Contacts, Calendars**

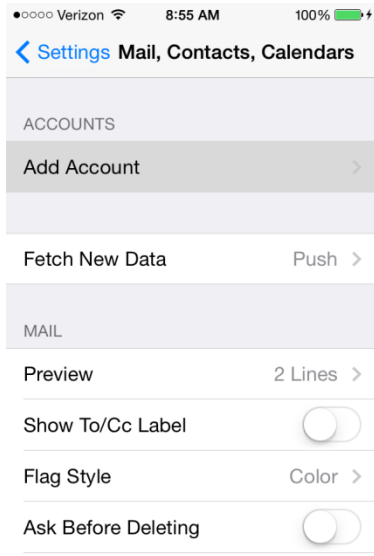

If you previously had your device set up with your Nefcom email account, it will need to be deleted.

This only removes the connection between your device and the email system. **It will not delete any mail off of the server.** All of your emails will still be present once you add your account back with the correct information.

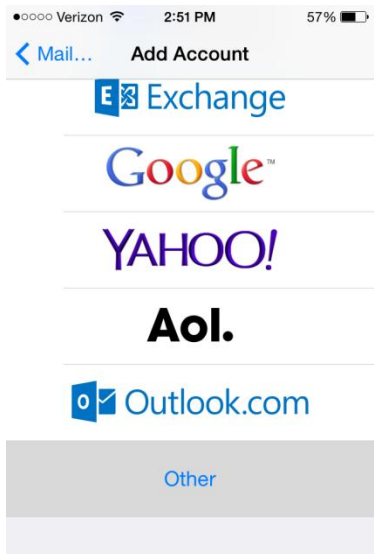

Select the mail account associated with your Nefcom Mail.

Select **Delete Account** and confirm that you want to delete the account.

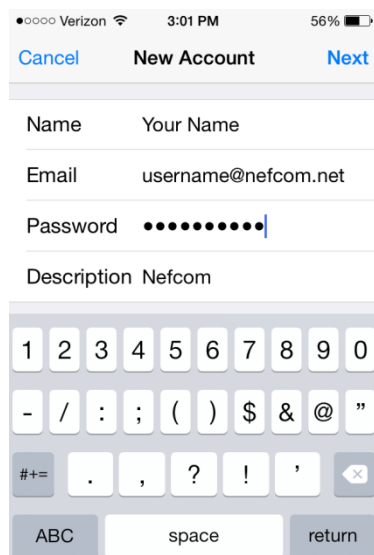

Select **Add Account**

Select **Other**

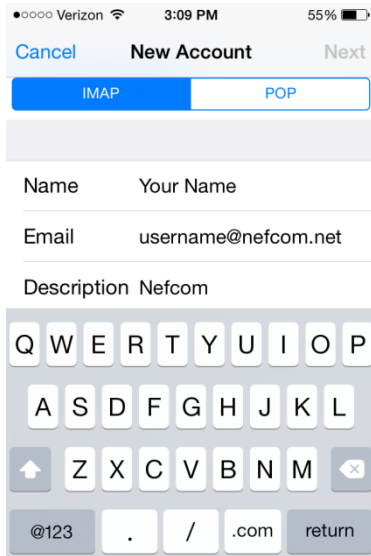

Then **Add Mail Account**

Enter your account information:

- ❖ Your name
- ❖ Your nefcom.net e-mail address
- ❖ Your nefcom.net e-mail password
- ❖ A description of the e-mail account: Nefcom

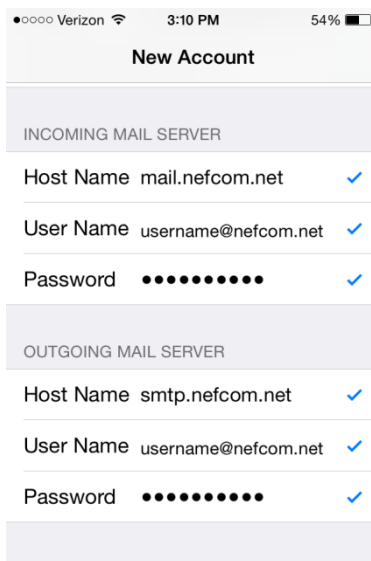

Select **Next**

Select **IMAP**

The IMAP option synchronizes your phone with your account and emails on the server every time they are connected.

If you delete an email from your account on your phone, it will also be deleted from the server.

Fill in the remaining fields as shown.

Make sure to enter your full nefcom.net email address in the User Name sections

Select **Next**

Once you see all check marks beside your entries; your mail has been configured.

Open your Mail app

Your email account will begin to synchronize.
